

ARKO is a retractable roof system on a cantilevered timber frame without frontal posts, specially designed for clients wanting to maximise their view.

Like other Aalta roof products ARKO is motorised with remote control. The flexible textile membrane can be made to retract or extend with the press of a button and so provide you with the best of all weather conditions. The retractable roof is manufactured from high-quality materials, whilst the structure and the runners can be chosen in different kinds of finishes and colours.

Key Features

- The structure made in Scandinavian timber is autoclave treated and supplied, including arms, shoulders, runners and posts;
- Needs to be installed to a supporting wall;
- The PVC fabric is durable and waterproof with a minimum of maintenance;
- Designed to resist strong winds (up to 50 km/h);
- Motorised operation and remote control;
- 5 years quality guarantee.

Never worry about the season again

ARCH ANCHORS

Z = Anchorage encumbrance chart

PROJECTION cm	Z min	Z max
175	188	212
200	164	212
225	152	209
250	152	201
275	152	191

IMPORTANT:
the projection is determined by the available anchorage height.
The arched beam can't be cut to size.
