

Client: South Australian Cricket Association
Location: Bar Area - West Stand, Adelaide Oval
Project: 3 Sail Shades
Fabric: 'Outlook' Polyester Mesh, Colour 'Porcelain'

Scope of Works:

Following the recent upgrade to the Western Grandstand, the South Australian Cricket Association required shading for the new Bar Area and Terrace. The brief was to design and install a series of sail shades to provide shading for the bar area whilst maintaining the views across the parkland. Utilising 3D software Shadeform were able to model the shading footprint of the proposed shade structure for Client evaluation prior to manufacture.

The main engineering challenge was to design and install columns with custom wall brackets so as not to conflict with the reinforcing and post tensioning systems within the main terrace slab. Specialist radar scanning and core-drilling contractors were engaged as part of the installation team. The sails were installed to custom posts and specialist brackets to the bulkhead above the bar. The sails were designed with a mid-point connection to maximise shading for patron and staff of the new bar.

Sail Shade structures are the perfect solution for most residential and commercial shading and all-weather applications. Why not contact Shadeform today to discuss your project?
