

Client: Private
Location: Seaview Downs, Adelaide, South Australia
Project: Corradi Millenium Retractable Waterproof Roof System
Colour Details: Eclissi Opaque PVC 'White', Framework 'Jasper'

Scope of Works:

The owners of a stunning residence at Seaview Downs required a contemporary retractable solution to provide all-weather protection for their entertaining deck whilst maintaining the fantastic views. The solution would need to be functional whilst complementing the elegance of the Client's home. The Corradi Millenium is the ultimate in contemporary style and functionality with it's all-weather retractable waterproof roof system and elegant twin post framework. The Millenium 'tilted' system was designed and installed to follow the roof pitch of the Client's house. Tilted Corradi systems enable the installation of a retractable gutter which can channel rainwater into a down pipe concealed within the twin-post framework.

This Corradi Retractable Roof covers an area of 7.0m wide with an extension of 2.9m enabling outside entertaining in all weathers!! The Client opted to complement the Millenium system with a Corradi Ermetika motorized blind and infill panel to enclose the balcony and provide vertical shade with UV protection.

The remote controlled motorized system is designed to withstand strong winds, can be installed flat or tilted and is the only retractable system designed from the ground up to resist rain for the ultimate outdoor protection. It utilizes a PVC fabric that is durable and waterproof, and is designed with long lasting awning components to ensure the longest possible life with a minimum of maintenance.
